

Superstore Sales Analysis — Business Insights Report

1. Problem Statement

The goal of this analysis was to identify top-performing and underperforming areas across product categories, regions, states, and customer segments using the Superstore sales dataset (2015–2018) of 9,800 rows. The objective was to uncover actionable business insights that can improve profitability, optimize product strategy, and support data-driven decision making.

2. Key Findings

- Technology is the highest-grossing product category, generating approximately \$827K in total sales and demonstrating consistent growth between 2017 and 2018.
- The West region is the most profitable, generating approximately \$710K in sales and outperforming the East, Central, and South regions.
- West region is 5.73% more than East
30.63% more than central
45.21% more than south.
- States such as Wyoming, South Dakota, Maine, West Virginia and North Dakota consistently underperform or generate very low profits.
- Sales show noticeable growth during year-end months, indicating strong seasonal demand and opportunities for promotional campaigns.

3. Business Recommendations

- Increase marketing investment in the West and East regions to maximize returns from high-performing markets, So instead of spreading the marketing budget equally across all 4 regions, invest more money in West and East to grow them further and get better returns.
- Re-evaluate the product mix and pricing strategy in consistently loss-making states such as Wyoming and South Dakota,.
- Expand inventory and promotional efforts for Technology products because they generate the highest revenue.
- Monitor product profitability regularly and discontinue or redesign consistently underperforming products.

- Leverage seasonal demand by launching targeted campaigns before peak sales periods.

4. Tools Used

- SQL (SQLite / DB Browser for SQLite)
- Tableau Public
